

LATICRETE® System materials are ideal for use in swimming pools as smooth finish coatings over the gunnite and concrete pool shells and as waterproof, chlorine resistant plasters for gunnite, concrete and cement block pools.

LATEX FINISHING PLASTER: LATICRETE Tri-Poly Fortified #1544 Bright White Sanded Grout mixed with LATICRETE 3701 Mortar Admix or LATICRETE 8510 Bonding Admix can be applied as a finish plaster coating 1/8" (3 mm) thick over grey cement plaster, cement block, concrete or gunnite.

LATICRETE 10 POOL COAT: a specially designed latex additive is combined with filler powder in a factory-proportioned unit that makes a thin pool coating or paint. LATICRETE 10 Pool Coat provides a bright white, chemical resistant finish that is applied by brush, roller or spray.

LATEX POOL PAINT: LATICRETE 644 Bright White Unsanded Grout is mixed with LATICRETE 3701 Mortar Admix or LATICRETE 8510 Bonding Admix and applied by brush, roller or spray.

FILLER COATS: To fill uneven surfaces by brush or roller, as well as make plaster coatings up to 1/8" (3 mm) thick, use LATICRETE Tri-Poly Fortified Sanded Grouts (1500 Series) and LATICRETE 3701 Mortar Admix or LATICRETE 8510 Bonding Admix.
